

CHAPTER 14.

MARINE TRANSPORTATION

14.1 INTRODUCTION

This chapter describes the potential environmental consequences associated with implementation of the alternatives for the Army Air and Missile Defense Task Force (AMDTF) project within the region of influence (ROI) for marine transportation. For a description of the affected environment for all resources, refer to the respective chapters of Volume 2 (Marine Corps Relocation – Guam). The locations described in that volume include the ROI for the Army AMDTF component of the proposed action and the chapters are presented in the same order as in this volume. See Volume 6, Chapter 4 for a discussion of on base and off base roadways.

14.2 ENVIRONMENTAL CONSEQUENCES

The proposed action involves construction and operations that would occur on land only. The proposed locations are in the central and northern portions of the island, and the anticipated effects would not extend to the coastline. Therefore, an analysis of marine transportation is not presented in this chapter.
